

# "Unveiling Faculty Salary Trends in Education"

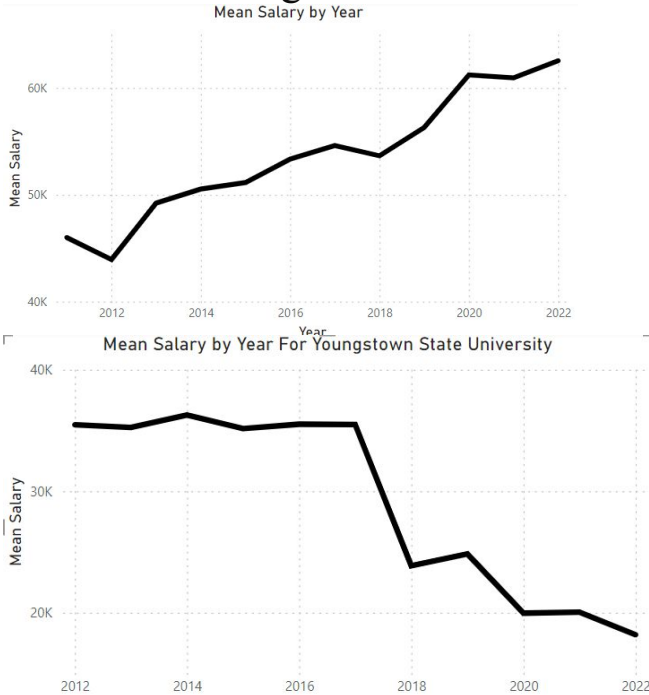

Distribution Of Earnings Through Schools

The examination of salary distribution over 13 different universities in the united states over the period of 12 years reveals some interesting facts. The data shows us more than 50% of earnings are from a single university which even overtakes the others in terms of no of departments and no of employees working in it. We do have the top three departments of three years and the total salary during the timeperoid . One thing we can observe is we do not have any common departments in top 3 for those selected time period and there was massive increase in salary from the year 2011 to 2022 with an increase of 350%.

While a general upward trend in total mean salary suggests overall growth in the educational sector, our analysis reveals intriguing variations among individual schools. Despite the sector's apparent prosperity, some schools experience declining average salaries over time, challenging assumptions of uniform growth.

Total Salary 2011, Total Salary 2016 and Total Salary 2022
